WWW.GASTURBINE.ORG

The Gas Turbine Association (GTA) serves as a unified voice for the gas turbine power industry. GTA members work together to find solutions to regulatory, R&D funding and market issues.

Advancing Gas Turbine Technology

Meeting challenges with new R&D programs.

GTA works with the government in identifying the common R&D challenges impeding the development of the next generation of gas turbines. The Association develops R&D program and funding recommendations for addressing these technical challenges, and works with Congress to implement the plan. GTA also develops technical guidelines needed to increase understanding and utilization of gas turbine engines.

Improving Market Conditions

Selling the advantages of gas turbines to meet the growing demand for power.

GTA provides a line of communication between gas turbine power plant developers, users, financiers, investors, the gas turbine manufacturing sector, Congress and the Administration. By developing industry positions and conducting forums to distribute information about gas turbines to key stakeholders, GTA influences key issues impacting the worldwide demand of gas turbine technology, such as electric industry restructuring.

Rational and Achievable Emissions Standards

Making certain the government knows that gas turbines provide clean, fuel-efficient, reliable power.

GTA develops and implements strategies for ensuring reasonable and responsible environmental practices in the gas turbine power industry. The Association actively promotes rational and achievable environmental policy recommendations that encourage the use of clean efficient gas turbine power plants in new and retrofit installations.

Ensuring Our Government Works for Us

When the rules change - you need a voice in Washington.

GTA increases the government's recognition and support of the gas turbine industry. The Association educates policy makers on applications and advantages of gas turbines, and advocates positions of interest on legislative and regulatory proposals. The gas turbine industry is improving environmental, technical and market conditions through GTA's active governmental affairs program
